Paul P. of New York School of FinanceThis book written by Paul P. (the founder of New York School of Finance in NYC) is an AMAZING book just on the technical skills that a true bulge bracket IBD / M&A / financial sponsor / leverage finance / or PE Sr. Associate would need to know to not only get the job but distinguish themselves in that role. There are so many good things to mention about this book. One thing right off the bat is that 99% of books on this topic are not written from the perspective of an actual practitioner whom worked at bulge bracket banks (i.e. Paul worked at both Morgan Stanley AND TH Lee on the buyside). Majority of such books on PE are written from the perspective of academics or LPs determining which fund to invest in. This book truly covers the entire modeling aspect of what a post MBA Sr. Associate at a tier one mega-cap PE fund would be expected to know and do on a daily basis. I personally work within later stage principal investing as a founder of my own fund so I know this material inside out and I have never seen a book on this technical level except for Joshua Perl's "Investment Banking" book, also by Wiley Finance. However, that book is on valuation in general whereas this entire book is exclusively dedicated to just LBO analysis in particular. I personally recommend this book to all IBD and PE clubs at top 5 / 10 MBA programs as a way to train their students to master the modeling skills of mega-cap PE fund sponsors. If an MBA student truly masters this book they will for certain get a job in PE as most funds expect Pre-MBA Associates, Associates, and Sr. Associates to have already mastered this material during their time on the sell-side.
